---

## EDUCATION

Drexel University  
Bachelor of Science in Electrical and Computer Engineering  
Cumulative GPA: 3.55

Philadelphia, PA  
June 2023

## TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript/TypeScript, C, MATLAB, VHDL, HTML/CSS
- **Cloud (AWS):** Lambda, ECS/EKS, S3, DynamoDB, Glue, Step Functions, SageMaker, CloudWatch, etc.
- **Infra & CI/CD:** AWS CDK, CloudFormation, (internal) Code Pipeline; 80%+ org-wide test coverage; weekly deploy cadence
- **Data & ETL:** Batch/stream pipelines, schema design, transformations, data quality checks, orchestration
- **Architecture:** Domain-driven design, BFF/API integration, REST services, pagination & caching etc.
- **Kubernetes:** Autoscaling, rollout management, basic observability

## WORK EXPERIENCE

Amazon Ads — Seasonal Budget Planning Service  
*Software Development Engineer*

Chicago, IL  
January 2024 – Oct 2025

- Designed and shipped a multi-region planning service that recommends how much to spend, where, and when, from metrics data pipeline → service storage → batch model inference → REST API → Ads Console.
- Served thousands of advertiser plans and influenced >\$1M in ad campaigns to date.
- Delivered p95 800ms latency and 99.9% Tier 2 availability; instrumented adoption/error/latency dashboards and presented metrics in weekly business reviews.
- Cut run costs by preferring AWS Lambda over ECS where feasible and by switching from real-time to monthly batch inference.
- Translated heuristic data science ML training and inference models into production-grade code with robust data contracts, validation, and operations.
- Integrated marketplace clickstreams (daily aggregates) and multi-surface ad inventory data; exposed REST endpoints and built the front-end components that collect plan settings and render seasonality graphs.
- Led roadmap creation & iteration as engineering POC; coordinated across backend, data, and console teams.

Philadelphia Industrial Development Corporation (PIDC)  
*Navy Yard Smart Grid Coop*

Philadelphia, PA  
April 2021 - June 2022

- Prepared a utility data analysis for customer usage, rate design, distribution grid management and PJM market interaction
- Added updates to the GridNOC and OSI/PI data visualization system as grid expansion projects were completed
- Assisted with the annual budgeting, cost modeling and financial management of The Navy Yard Electric Utility using Microsoft Excel
- Drafted Battery charge schedule used for peak shaving and generated run times for Company Generator, based on PJM commodity market

## PROJECT EXPERIENCE

Player Performance Insights — Data & ML Project  
*Co-creator and Lead Developer*

Personal  
May 2025 – Present

- Developed a Python-based analytics pipeline to generate player trend insights from three years of NFL data.
- Designed schemas for ingesting time-series stats, trained regression and neural network models to detect performance streaks and seasonal patterns and built dashboards to visualize results.
- Produced natural-language summaries such as “Player A starts the season hot but declines until Thanksgiving,” using model-driven text generation.

Collaborative Comment System — Full-stack (internship)  
*Engineering Lead and Co-Designer*

Amazon  
June 2024 - Present

- Implemented a lightweight collaboration/comments module with Java REST APIs, IAM-backed auth, server-side pagination, and lazy-loaded caching; logged usage and errors to CloudWatch with dashboards for adoption and health.

## HONORS AND AWARDS

*Drexel Dean's Scholarship, Dean's List Drexel College of Engineering all 5 years, AWS Certified*

## CERTIFICATIONS

AWS Certified Cloud Practitioner (2025), AWS Certified AI Practitioner (2025)
